

ABSTRACT

An image retrieval and memory-accessing business card scanning device has a housing with a accommodating space, an image retrieval unit set in a side of the device, a process unit for handling a plurality of pictures taken by an image retrieval unit, a memory expansion slot set in one side of the housing, a memory card set in the memory expansion slot to store a plurality of text images and pictures, a scanning unit set in the accommodating space to scan text information on a business card, and an image retrieval button set in one side of the housing as a switch for starting the image retrieval process. By plugging a business card into the business card entrance, the text information on the business card will be scanned and transformed into image data. The device can also take pictures for combination with the business cards.
